

## **Sustainable Earth Eating's Call to Action:**

**Sign our petition to help change laws and regulations affecting climate/food production. Ask Congress to:**

### **Climate Change**

- 1. Protect public lands from cattle grazing at taxpayer's expense.**  
Cattle grazing destroys the natural environment and habitat for native wildlife and species, which protect the land and do not contribute greenhouse gas emissions to the atmosphere.
- 2. Seek greater accuracy in U.S. government agencies use of data relating to greenhouse gas emissions.**
- 3. Seek greater funding for the Environmental Protection Agency** to accurately recognize Greenhouse Gas Emissions from livestock farming, which often do not include emissions from food grown for cattle feed or related transport.

### **Health**

- 1. Change school lunch programs to provide alternatives to cow's milk** (some children are allergic to cow's milk or have a religious reason to not drink it.) Also, add vegetarian options for school lunches.
- 2. Propose accurate budgets at Dept of Health and Human Services and Medicare to recognize costs to health from meat diets.**  
Taxpayers should know how much diet choices contribute to ill health and federal expenditures that may contribute to the problem through outdated information.  
We propose more funding be allocated to diet education.
- 3. Propose greater funding for National Institutes of Health to conduct studies on benefits of plant-based diets.**
